EXECUTIVE OVERVIEW

This document presents **the Project Plan (Deliverable 1)** for the System Development project for **Otherworld Games**, a collectible card game retailer owned by Alex La Prova. The purpose of this deliverable is to establish a clear understanding of the client's business needs, define the project's scope and organization, and outline how the team will collaborate to deliver a successful solution.

Otherworld Games currently relies on an **outdated inventory system** that is **difficult to use** and produces **inaccurate stock counts**. This has created operational challenges for the business, particularly in managing collectible card products. The client and store employees have **limited technical** experience, making ease of use and accuracy critical requirements for the new system. This project aims to address these issues by developing a modern, database-driven inventory management system tailored to the client's workflow and technical comfort level.

This deliverable identifies the **client and target users**, clarifies the **business problem**, and explains the **purpose and expected value** of the proposed system. It also documents the project's organizational structure, including team roles, responsibilities, communication strategies, and meeting schedules. These elements ensure accountability, clear coordination among team members, and effective communication with the client throughout the project lifecycle.

Additionally, this report establishes the foundational logistics of the project, such as the use of an **online GitHub repository** for version control and collaboration, and formal communication channels for both internal team coordination and client interaction. By defining these processes early, the team **reduces project risk** and ensures **consistent progress** across future deliverables.

CLIENT

Our client is Alex La Prova, the owner of Otherworld Games and the co-founder of Montreal Comic-Con. He needs an inventory system with the use of a database to manage collectable cards for his shop, like Pokémon, TCG, MTG, Lorcana, One Piece. The users will be the employees of his shop to manage the stocks of their cards. Our client has very minimal computer knowledge, including his employees, so we must take this into consideration when creating our system. The old inventory system is outdated and difficult to use for those who aren't familiar with these outdated systems. Also, their current system isn't accurate as it shows false amounts of their stock. Thus, our implementation project will solve this business problem.

ORGANIZATION

Meetings

Tuesdays from 2:30pm - 4pm in D-207 in person since our schedules all match during this time.

Online Repository

Communication Strategy

The team will communicate via Discord. In case of emergencies (e.g. teammate cannot be reached), we will communicate through our phone numbers.

Our policies include being respectful to one another, being punctual to the meetings, asking questions when in doubt, and to provide the most clear and concise responses.

Areas of Responsibility

Team Leaders

Deliverable 1: Farwah Bakhsh

Deliverable 2: Alan Telemishev

Deliverable 3: Zak Yasser Ali Othman Radi

Deliverable 4: Zak Yasser Ali Othman Radi

Deliverable 5: Daiyan Abrar Samin

Deliverable 6: Daiyan Abrar Samin

Deliverable 7: Alan Telemishev

Client Contact

Name: Alex La Prova

Phone: 514-939-9970 (Otherworld Games)

Address: 1839 Saint Catherine ST W, Montreal, Quebec H3H 1M2

Reports

Farwah Bakhsh will be responsible for making sure the reports are prepared properly, and on time for each deliverable.
